

Washington County – Pavement Distress Collection Services

1. What standard is the data to be collected to? ASMT D6433? *What standards do you normally use?*
2. Does the County require any type of data analysis, PCI calculation or asset management services as part of the RFP? *Please explain further.*
 - a. If so, does the County require a sampled PCI survey consistent with the provisions of ASTM D6433, or a 100 percent survey, which may be cost prohibitive?
3. Is the County willing to accept automated or partially automated methods for the pavement inspections? *Please explain further.*
4. Is there an estimated length (or % of network) available for the breakdown of network material type, asphalt and concrete? *No.*
5. Is there any form of GIS file already existing for the road network? *How in depth are you wanting?*
6. Is there a complete road list including estimated length, start and end points which would be made available? *Yes.*
7. Are any road inventory parameters required as part of the collection? *Explain further.*
8. What are the requirements of the *one printed color coded map*?
9. Would the County only be expecting a single direction survey of the network, or both directions? *The cost per mile should include both lanes.*
10. Which Pavement or Asset Management Software is the County currently utilizing? *One we built/designed*
11. Does the ~~city~~ *county* have a timeline of estimated commencement/completion date of the survey?
Start: ASAP Complete: December 15, 2015
